

Highway 38 Corridor Study

The South Dakota Department of Transportation (SDDOT) has identified the need to repair or reconstruct substantial portions of the SD Highway 38 Corridor between Humboldt and Sioux Falls in the 2030 to 2035 timeframe. In recognition of anticipated growth and changes in this corridor over the coming decade, the SDDOT wants to examine this corridor for potential improvements that are needed to accommodate anticipated traffic volume, safety, and mobility needs.

This study is a collaborative effort between the SDDOT, the FHWA, the Sioux Falls MPO, and the Cities of Sioux Falls, Hartford, Humboldt, Minnehaha County, and the public to develop a comprehensive plan for the corridor. The outcomes from this study will serve as a guide to the SDDOT and other agencies along the corridor for future improvements that address needs well into the future.
